FeverSafe

USE CASE

Connected Thermal Fever Screening
Mini Camera For Small to Medium Businesses

Mini Camera Solution
Contactless fever measurement, at up to 2 meters scan distance

The problem

Since the outbreak of the coronavirus in 2019, the world, as we knew it, drastically changed. Social distancing, isolation, lockdown are terms we are all familiar with today. The world is slowly lifting its head and globally many nations are returning or readying themselves to return to work and the public domain.

The threat of COVID-19 is still a reality and returning to the office and public domain will only be allowed under strict conditions. The spread of the virus needs to be stopped. Safety of employees and/or customers are paramount and all measures to detect potential threats and manage them effectively need to be taken. Fever screening is such a measure that can be used effectively to detect and manage potential threats.

The solution

FeverSafe's contactless, connected mini camera fever screening solution detects, in real-time the temperature of each visitor as he or she passes through an entrance.

All measured values are sent to the FeverSafe cloud platform and alert notifications are forwarded to control staff. Affected persons are notified via an on-site display, with instructions.

The FeverSafe platform further keeps a record of incidents and gives the ability to capture additional data around any event, for record keeping and to comply to regulations.

Unique benefits of the solution

1 Contactless Temperature Screening
The system is contactless and detect fever at a range of up to 2 meters.

2 High Accuracy
Detection accuracy of ± 0.5 ºC

3 Connected
The solution is connected to a cloud platform, allowing for remote notifications, accurate recordkeeping, dashboard views and reporting

4 Extendable
The solution can be customized to suit your needs with access control, facial recognition, HR database integration, etc.

USE CASE

Connected Thermal Fever Screening

Mini Camera For Small to Medium Businesses

Features & Benefits

Features

- Contactless
- High accuracy ± 0.5°C
- Scan distance of up to 2m
- Connected to cloud platform
- Notification and escalation engine
- Customer portal
- Historic reports
- Small to medium sized
- Midrange cost
- Integration options via API

Multiple Uses

The FeverSafe Platform can work with multiple camera solutions, providing a unified view and reports. Addon options, like facial recognition available.

Dashboard and Analytics

Secure dashboard available on the web.

Set up key triggers with notifications and warnings, set up action steps, notify key personnel in extreme circumstances.

Daily temperature reports can be generated, and trends can be identified. Bespoke development according to client's needs.
